

Dienste

Die [Swagger](#)-Dokumentation der erhältlichen Endpunkte (standardmässig unter folgender URL: `/formservice/doc/rest-api/`) wird in Echtzeit generiert und bietet die Möglichkeit, die verfügbaren Dienste auszutesten:

auth

Authorization endpoints

POST

/auth/token

OAuth 2.0 token endpoint

data

getting form data

GET

/data

Pings the API.

GET

/data/attachment/{guid}

Returns a single attachment for a stored form according to its attachment GUID.

GET

/data/attachments/{guid}

Returns all attachments for a stored form according to its GUID as a zip file.

GET

/data/json/{formID}/{guid}

Returns the JSON of a stored form. A valid mandant-/form identification must be passed beside the GUID.

GET

/data/pdf/{formID}/{guid}

Returns one or more PDFs of committed forms if any. Use a comma separator to lookup for several 'GUID's. If only one GUID is submitted, the response is a single PDF, otherwise a ZIP file is returned.

GET

/data/xml/{formID}/{guid}

Returns the XML of a stored form. A valid mandant-/form identification must be passed beside the GUID.

Parameters

Try it out

Name	Description
formID * required string (path)	Form identification (formID)
guid * required string (path)	Globally Unique Identifier (GUID) containing 36 characters including dashes.
handler string (query)	Specific REST handler identification. Pass empty for the default handler.

Responses

Code	Description	Links
default	<div>default response</div> <div>text/xml</div> <div>Controls Accept header</div>	No links
