

Aktivierung REST (server side)

Um die Rest-Schnittstelle zu aktivieren, muss das web.xml mit folgenden Einträgen ergänzt werden:

web.xml

```
...
<servlet>
  <servlet-name>eFormsRestService</servlet-name>
  <servlet-class>com.jaxfront.eforms.rest.EFormsRestServlet</servlet-class>
  <init-param>
    <param-name>jersey.config.server.provider.packages</param-name>
    <param-value>
      io.swagger.v3.jaxrs2.integration.resources,
      com.jaxfront.eforms.core.rest,
      com.jaxfront.eforms.core.rest.auth,
      com.jaxfront.eforms.core.rest.auth.endpoints,
      com.jaxfront.eforms.core.rest.auth.filter,
      com.jaxfront.eforms.core.rest.auth.exception.mapper
    </param-value>
  </init-param>
  <init-param>
    <param-name>javax.ws.rs.Application</param-name>
    <param-value>com.jaxfront.eforms.core.rest.JAXFormsRestApplication</param-value>
  </init-param>
  <load-on-startup>3</load-on-startup>
</servlet>
...
<servlet-mapping>
  <servlet-name>eFormsRestService</servlet-name>
  <url-pattern>/services/rest/*</url-pattern>
</servlet-mapping>
...
```

Die Schnittstelle ist dann unter folgender URL erreichbar:

[SERVER_URL]/formservice/services/rest/...
